

# Important Facts

## 1. SAVES YOU MONEY

Formadrain can drastically reduce underground pipe repair costs by completely eliminating any digging. In addition to cost savings, there are a number of other important benefits.

## 2. LESS ROAD REPAIRS

No digging means no road damage and no big messes, patches or potholes in spring!

## 3. PROVEN and LONG LASTING

Formadrain no-dig systems have been installed and used since 1994 across North America with tests proving repairs will last over 50 years!

## 4. 100% GREEN SOLUTION

It is friendly to the environment because it is odorless and completely nontoxic. It protects the environment and your underground power lines.

## 5. DEVELOPED IN NORTH AMERICA

Headquartered in Montreal, Formadrain Inc. was founded and developed in Quebec, Canada and now has installers all across Canada and the United States.

# Success Stories

“...The technology is brilliant; absolutely no disruption of my landscaping or of my basement. I cannot recommend them highly enough.”

— Barbara Malcolmson

“An Authorized Licensee lined our clay pipe sewer line with Formadrain. The sewer line had tree roots growing through the joints causing blockage. The process took approximately two hours to complete and there was no mess to our house or yard. I highly recommend this process to anyone that is not wishing to dig out existing lines which would disturb driveways or street pavement.”

— Scott Jordison

“After many years dealing with a sewer problem due to root intrusion, I was told about digging to replace the lateral, which involved breaking the sidewalk and the street and redoing some landscaping. All of this was at my expense and added up to around \$20,000, plus a deposit for permits at the City. I contacted a Formadrain Authorized Licensee. After only a few hours my problems were forever gone, no sidewalk nor street broken and my landscaping was intact.”

— Yves Brunet

## No-Dig Technologies Since 1994

# FORMADRAIN®

The system that repairs house sewers without digging...

**Every year, thousands of homeowners need to repair their house sewer.**

But today, with the Formadrain technology, there is no more need for digging.

Unlike the costly conventional methods, with our no-dig system, we can rehabilitate the existing pipe in place, which causes no damage to the environment.

## The Formadrain liner can repair all kinds of damages including:

- Split, cracked, broken or poorly installed joints
- Stops root intrusion permanently
- Stops water infiltration\*
- Leakage due to corrosion or wear and tear

\*Special handling may be required in the case of major water infiltration.

# THE BENEFITS OF OUR NO-DIG SYSTEM

**NO DIGGING:** All repairs are done from existing cleanouts in the house. There is absolutely no digging.

**FAST REPAIRS:** With the Formadrain no-dig system, complete repairs take just a few hours instead of days and homeowners can stay in their home. Additionally, the new sewer is ready to use immediately upon completion.

**SUBSTANTIAL SAVINGS:** With Formadrain, there is no need for digging equipment and related labour. This drastically reduces costs and makes repair planning much easier.

**MINIMAL SETUP SPACE:** The no-dig approach has minimal impact on street circulation.

**ENVIRONMENTALLY SAFE:** The repair job is done entirely inside the damaged pipe thus posing no threat to underground wires or pipes.

**LONG LASTING:** According to exhaustive tests conducted by the prestigious Center for Advancement of Trenchless Technology (CATT) of the University of Waterloo in Ontario, repairs done with the Formadrain system will last 50 years or more.

**CERTIFIED LINERS:** The Formadrain Liners Formapox 101 and Durapox are certified by the internationally renowned National Sanitation Foundation (NSF). Formapox 101 has been NSF14 certified for years. In order to qualify for certification, Formadrain is subjected to rigorous testing throughout the year. Formadrain liners are also ICC-ES certified for plumbing codes compliance.
